

## How to set up a twitter feed

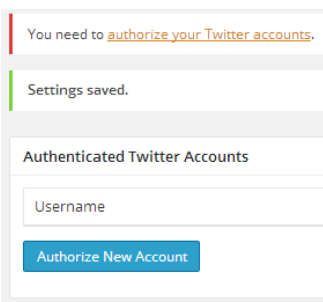

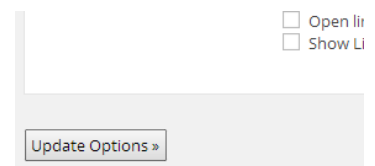

This guide shows you how to add a twitter feed to your website. You can either add it to the footer or to the third column on the right of your homepage.

If you would like to add a button to your website, such as to follow your twitter account, visit the [twitter support site](#) and copy the code into the Text editor of the page you want to add it to.

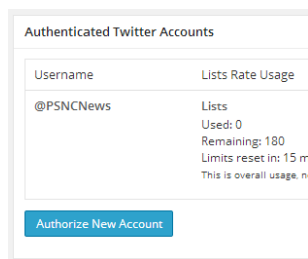

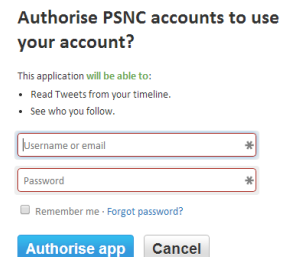

1. Go to *Settings > Twitter Widget*

2. At the top, you will have two error messages. Scroll to the bottom and click *Update Options*.

3. The message at the top will say Settings Saved. Click *Authorize New Account*.

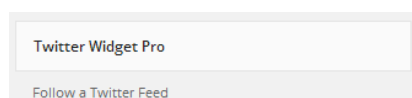

4. You will be taken to the twitter website. Enter your username and password.

5. You will be redirected back to the admin site. Your new account will be displayed, and the second error message will have gone.

6. In the section below, select your username. Edit the settings as required and click *Update Options*.

7. Your twitter account is now linked to your LPC account. To add it to the footer or your front page, go to *Appearance > Widgets*

8. Drag the Twitter Widget Pro widget into the area you want it. Edit the settings and click *Save*.
