

More easily styled tables - TinyMCE Editor

This now allows tables to be added to pages and posts.

When editing a page the user is now presented with a table menu in which they can add a table to the page:

Once you have added a table you can then edit the table properties from the same menu which will allow you to change the back ground colour of the cells, add a border, set the alignment etc. You can also edit the row properties and column properties with similar options.
